Employee Attendance Management System

Abstract

This project proposes an Employee Attendance Management System developed using C++ to automate attendance recording, report generation and record management.

Keywords

Employee Attendance Management, C++, File Handling, Automation

I. Introduction

Manual attendance is slow and error-prone. Using C++ structures/classes and file handling improves efficiency.

II. Problem Statement

- Manual attendance is time-consuming.
- Attendance errors occur frequently.
- Difficult to maintain records.
- No centralized tracking.

III. Objectives

- Automate attendance.
- Maintain employee records.
- Generate reports.
- Provide user-friendly interface.

IV. Literature Review

Console-based C++ attendance systems are useful for academic projects and small organizations.

V. Proposed Methodology

Developed using C++ and file handling. Features include employee registration, attendance marking, report generation, search, update and delete records.

VI. System Architecture

- User Interface Module
- Attendance Module
- Data Storage Module
- Admin Module

VII. Tools and Technologies

- Language: C++
- IDE: VS Code/Code::Blocks/Dev-C++
- Platform: Windows/Linux

VIII. Expected Outcomes

- Accurate attendance records
- Reduced errors

- Reliable storage and retrieval

IX. Project Timeline

Phase	Task	Duration
Analysis	Requirement study and planning	Week 1
Design	Database/system flow	Week 2
Coding	C++ implementation and file handling	Week 3–4
Testing	Module testing and validation	Week 5
Documentation	Final report and submission	Week 6

X. Applications

- Offices and companies
- Schools and colleges
- Small businesses

XI. Conclusion

The proposed system improves attendance management through automation and can be extended with database and biometric integration.
